Bang & Olufsen Beocenter 2200 Service Manual 18th February 2010. Next post. Previous post. Somewhat random blog post, but I thought I should share this service manual for free so that no-one else has to pay for it. Contains schematics/circuit diagrams for the great-looking, but somewhat maligned Bang & Olufsen Beocenter 2200 from the mid-80s. Afraid I can't offer any support on this, but it ...

Contains the final statistical record of companies which merged, were acquired, went bankrupt or otherwise disappeared as private companies.

The aim of this book is to support industry in their effort to design environ mentally friendly products. The book comprises a method and a manual for life cycle assessment of products and it includes examples of how industrial companies have used the method succesfully in the design of more environ mentally friendly products. The method has been developed over a period of four years under the Danish EDIP programme (Environmental Design of Industrial Products) by a team representing the Technical University of Denmark, five Danish industrial companies, the Confederation of Danish Industries and the Dan ish Environmental Protection Agency. The method is coheherent and operatinal and it is well documented by a large variety of examples including five different complex electromechanical products. It guides the user through the inventory and assessment of environmental impacts of products and shows how various products and design solutions during product development can be compared. The method is supported by a base of data for the assessments of environmental impacts and is thus designed as a tool which will make it possible for the user to start on life cycle assessment at once. The book also guides the user through the identification of environmental improvement potentials in the product and the setting of environmental specifications with in the general concept of overall commercial optimization. The partnership between industry, authorities and university has been highly fruitful.

Bang & Olufsen, the famous Danish producer of high-end home electronics, is well known as an early exponent of value-based management: the idea that there should be consistency in what the organisation does, a certain continuity between what the company develops and sells, and the beliefs and practices of the employees. This study investigates how company values are communicated and the collective identity is articulated through the use of such concepts as 'culture', 'fundamental values', and 'corporate religion', as well as how employees negotiate these ideas in their daily working lives. As this book reveals, the identification of values, meant to create cohesion and solidarity among employees, came to symbolise and engender a split between the staff and the other parts of the company. By examining the rise and fall of the value-based management approach, this volume offers the indispensable insight of anthropological enquiry to expose how social realities challenge conventional management strategies and therefore must be considered in the development of new management techniques.
