A Boston Globe Best Nonfiction Book of 2011 Celebrated as one of the most poignant stylists of his generation, André Aciman has written a luminous series of linked essays about time, place, identity, and art that show him at his very finest. From beautiful and moving pieces about the memory evoked by the scent of lavender; to meditations on cities like Barcelona, Rome, Paris, and New York; to his sheer ability to unearth life secrets from an ordinary street corner, Alibis reminds the reader that Aciman is a master of the personal essay.

This new edition has been fully revised to bring pharmacologists and trainees fully up to date with the latest developments in the field of medical pharmacology. Beginning with an introduction to general pharmacological principles, the following sections discuss drugs for common and less common disorders found in different regions of the body. The seventh edition includes new drugs, as well as the latest therapeutic guidelines from authoritative sources such as the World Health Organisation (WHO) and the British National Formulary (BNF). Each topic includes key point summary boxes as well as illustrations, flowcharts and tables to enhance learning. A 'problem-directed study' question at the end of each chapter helps trainees test their knowledge. An extensive appendices section includes a list of

Optical Recognition Software. Donaldson advocated fresh fat meat, water, and exercise to treat allergies, cardiovascular disease, diabetes, hypertension, gallstones and obesity. The book described "the big bad seven" foods: milk, cream, ice cream, eggs, cheese, chocolate and flour which should be eliminated from the diet. Surgeon Charles G. Heyd wrote a supportive preface for the book. The diet that Donaldson put his patients on consisted of three fatty steaks a day, three cups of coffee and six glasses of water. Strong Medicine attracted considerable controversy. It was criticized by physician Morris Fishbein who commented that the "book is hardly scientific, so presumably what the physician was taught in his youth he has forgotten in his later years." Donaldson's extreme dietary views were classified by Fredrick J. Stare as "food faddism". Despite this, the book continues to have followers and promoters to this day.

This book is designed to provide all the information required for a sound understanding of diseases of the nose and paranasal sinuses and the surgical techniques used in their management. After an opening section on basic science, clinical and radiological assessment is explained and individual chapters focus on conditions ranging from infectious diseases, allergic rhinitis, and nasal polyposis to trauma, malignancies, and skin diseases. A wide variety of surgical techniques are then described with the aid of high-quality illustrations, covering nasal airway procedures and surgical approaches to the paranasal sinuses, including diverse endoscopic and image-guided procedures, nasal reconstruction, and endonasal and external rhinoplasty. The book is a collaborative project between the new generation of Turkish specialists and well-known experts from across the world. It will be of value for ENT doctors in all countries, as well as for students and trainees and those working in ENT-related fields such as maxillo-facial surgery, pediatrics, allergology, neurology, infectious diseases, and neurosurgery.
