Discussion surrounding the regulation and policy aspects of MRTs has also taken place in the US. In 2016 a US FDA commissioned report from the US National Academy of Science ' s Institute of Medicine was published, entitled Mitochondrial Replacement Techniques: Ethical, Social, and Policy Considerations. This report lays out a range of recommendations about how US researchers and clinicians should proceed with the clinical use of MRTs.

The report, titled Mitochondrial Replacement Techniques: Ethical, Social, and Policy Considerations analyzes multiple facets of the arguments surrounding MRT and concludes that it is 'ethically permissible' to continue clinical investigations of MRT, so long as certain conditions are met. They recommended that initially it should only be used for male embryos to ensure that DNA with mitochondrial disease would not be passed on.
