This book deals with a subject that has been studied since the beginning of physical chemistry. Despite the thousands of articles and scores of books devoted to solvation thermodynamics, I feel that some fundamen tal and well-established concepts underlying the traditional approach to this subject are not satisfactory and need revision. The main reason for this need is that solvation thermodynamics has traditionally been treated in the context of classical (macroscopic) ther modynamics alone. However, solvation is inherently a molecular pro cess, dependent upon local rather than macroscopic properties of the system. Therefore, the starting point should be based on statistical mechanical methods. For many years it has been believed that certain thermodynamic quantities, such as the standard free energy (or enthalpy or entropy) of solution, may be used as measures of the corresponding functions of solvation of a given solute in a given solvent. I first challenged this notion in a paper published in 1978 based on analysis at the molecular level. During the past ten years, I have introduced several new quantities which, in my opinion, should replace the conventional measures of solvation thermodynamics. To avoid confusing the new quantities with those referred to conventionally in the literature as standard quantities of solvation, I called these "nonconventional," "generalized," and "local" standard quantities and attempted to point out the advantages of these new quantities over the conventional ones.

When Peru's APRA - one of the oldest and most controversial political parties in Latin America - came to power in 1985, expectations were high for the new government, and in part because a decade of economic decline and social crisis had discredited both the military and the right as alternatives. APRA did manage an unprecedented consensus for two years. But a sudden shift in strategy to confrontational rhetoric and authoritarian tactics led to policy stagnation, economic collapse, and a surge of reaction and political violence from extremes of the left and right. Rather than playing the role of the strong centre, APRA acted as a catalyst for the polarisation process. The party's sectarian and authoritarian strains, coupled with the increasingly erratic behaviour of its once-popular young leader, Alan Garcia, created damaging and perhaps irreparable divisions between the party and the rest of society, and between society and polity more generally.

This newly revised edition is intended to serve as a practical tool for school administrators, physical education department heads, architects, planning consultants, and all others interested in planning new areas and facilities or checking the adequacy of those already in use. Chapter input was solicited from carefully chosen leaders in the field of athletic facility planning as well as from outstanding architects. Efforts were made to incorporate the most recent advances in facility planning and construction. Certain program areas, such as planning for the handicapped, were expanded, while outdated or irrelevant materials were deleted. The following topics are covered in separate chapters: (1) the planning process; (2) indoor facilities; (3) outdoor facilities; (4) swimming pools; (5) encapsulated spaces and stadiums; (6) service areas; (7) facilities for recreation, parks, and open spaces; (8) planning for the handicapped; and (9) trends in facility design. The book is illustrated with photographs and diagrams of the facilities discussed and selected references are cited at the end of each chapter. Appendixes include state requirements for school construction; checklists for building service, and security and safety planning; and supplementary photographs and figures. (MLF)

"A deeply generous and honest gift to the world." —Elliot Page
The author of I'm Afraid of Men lets readers in on the secrets to a life of reinvention. Vivek Shraya knows this to be true: people change. We change our haircuts and our outfits and our minds. We change names, titles, labels. We attempt to blend in or to stand out. We outgrow relationships, we abandon dreams for new ones, we start fresh. We seize control of our stories. We make resolutions. In fact, nobody knows this better than Vivek, who's made a career of embracing many roles: artist, performer, musician, writer, model, teacher. In People Change, she reflects on the origins of this impulse, tracing it to childhood influences from Hinduism to Madonna. What emerges is a meditation on change itself: why we fear it, why we're drawn to it, what motivates us to change, and what traps us in place. At a time when we're especially contemplating who we want to be, this slim and stylish handbook is an essential companion—a guide to celebrating our many selves and the inspiration to discover who we'll become next.
