Published for more than 50 years, this annual covers the year's main motoring events, from Formula One to the latest styling studies and concept cars, and takes an overview of the period it has chronicled. Famous photographers look back and select their favourite images from more than five decades of racing.

From a text message to a war, from a Valentine's rose to a flight or even having a child, How Bad are Bananas? gives us the carbon answers we need and provides plenty of revelations. By talking through a hundred or so items, Mike Berners-Lee sets out to give us a carbon instinct for the footprint of literally anything we do, buy and think about. He helps us pick our battles by laying out the orders of magnitude. The book ranges from the everyday (foods, books, plastic bags, bikes, flights, baths...) and the global (deforestation, data centres, rice production, the World Cup, volcanoes, ...) Be warned, some of the things you thought you knew about green living may be about to be turned on their head. Never preachy but packed full of information and always entertaining.

"This book analyzes how the governance of innovation can foster sustainability. The quest for innovation is consistently at the top of the agenda for policy makers around the globe, on the supra-national level, as well as for the nation states and all the way down to debates in local governance and policy boards. At the same time, sustainability is a core feature of this dialogue in creating, diffusing and using technologies and products so that human needs can be met, while unnecessary natural resources are not being used or destroyed.Based on these premises and given the complexity of sustainable innovation, there is an ever growing recognition among policy makers, industries and analysts that the development and diffusion of technological innovations need governing in order to contribute to societal goals such as climate change mitigation and resource efficiency. Such governance does not necessarily mean orchestration, imposing regulation or other policy measures in a top-down manner. Governance can be facilitated through a number of means and by various actors and different levels. This book presents a view of governance that involves almost all types of actors related to any specific sector or field."

"As a reference book it has to be classed as one of the best! There should be a copy of it in every college library." Association of Motor Vehicle Teachers' Newsletter The Motor Vehicle has been an essential reference work for both the student and practising engineer ever since the first edition appeared in 1929. Today it is as indispensable to anyone with a serious interest in vehicle design techniques, systems and construction as it was then. The current edition has undergone a major revision to include seven new chapters. These include Electric Propulsion; covering all aspects from lead acid and alternative batteries to fuel cells and hybrid vehicles, Static and Dynamic Safety, and Wheels and Tyres. The chapter on the compression ignition engine has been expanded to form three chapters, concentrating on aspects such as common rail injection, recently developed distributor type pumps and electronic control of injection. Automatic, semi-automatic and continuously variable ratio transmissions are covered in two new chapters. A third contains information on the latest developments in computer-aided control over both braking and traction, for improving vehicle stability, while another contains entirely new information on the practice and principles of electrically-actuated power-assisted steering. Also included is coverage of material detailing the latest knowledge and practice relating to safety systems, vehicle integrity, braking systems and much more. The established layout of the book is retained, with topics relating to the Engine, Transmission and Carriage Unit dealt with in turn. Each chapter is well-provided with diagrams, sections, schematics and photographs, all of which contribute to a clear and concise exposition of the material under discussion. Latest extensive revisions to a well-established title New chapters on electric propulsion and vehicle safety.

The history of Commonwealth Engineering spans some 70 years and its story is really a window into Australia's industrial and manufacturing development from the end of the First World War through to the early 1990s. At its peak the Comeng Holdings empire was the largest manufacturer of railway rolling stock in the Southern Hemisphere and at its zenith had the largest order book for rolling stock of any company in the world.
