Theories of the Bargaining Process: Coddington, Alan ...

The personality theory in bargaining emphasizes that the type of personalities determine the bargaining process and its outcome. A popular behavioral theory deals with a distinction between hard-liners and soft-liners. Various research papers refer to hard-liners as warriors, while soft-liners are shopkeepers. It varies from region to region.

A tour de force of theoretical reasoning, this book presents the most advanced analytical model of the bargaining process so far conceived. Focused essentially on the dynamics of the bargaining process, Coddington's model employs elements of several conceptual constructs--individual decision-making, theories of expectations and their adjustment, and environment concepts--to explain the nature of consistency in a bargainer's system of expectations and intentions. The book begins with a description of the bargaining process in an economic context and establishes an analytical framework. There follows a critical survey of bargaining theory in which the author selects those concepts, which he finds most valid and most applicable to his decision-making/expectation/adjustment model. The internal consistency of a wide class of bargaining models is then examined in a chapter on the relationship between decision-making and expectations. Since the theory of games has been used as a basis for bargaining process theory, the author devotes a chapter to an examination of the game-theoretic approach and an assessment of its value relative to his own approach. The author

concludes with a study of the specific capabilities of his own analytical model, with discussion of the possible combinations of assumptions with which the investigator may work. Although stemming from a problem in economic theory and of immediate intent to economists, the book's contribution to the general theory of conflict process and interdependent decision-making make it an important study for students of politics and international affairs as well as management and labor relations specialists.

In this book, Walton and McKersie attempt to describe a comprehensive theory of labor

negotiation. The authors abstract and analyze four sets of systems of activities which they believe account for much of the behavior found in labor negotiations. The first system of activities, termed "distributive bargaining," comprises competitive behaviors that are intended to influence the division of limited resources. The second system is made up of activities that increase the joint gain available to the negotiating parties, referred to as "integrative bargaining." They are problem-solving behaviors and other activities which identify, enlarge and act upon the common interests of the parties. The third system includes activities that influence the attitudes of the parties toward each other and affect the basic relationship bonds between the social units involved. This process is referred to as "attitudinal structuring." The fourth system of activities, which occurs as an integral aspect of the inter-party negotiations, comprises the behaviors of a negotiator that are meant to achieve consensus within one's own organizations. This fourth process is called "intra-organizational bargaining." Each sub process has its own set of instrumental acts or tactics. Therefore, each of the four model chapters is followed by a chapter on the tactics which implement the process. These chapters translate the model into tactical assignments and include an abundance of supporting illustrations from actual negotiations. This study should be of interest to several audiences, including students and teachers of industrial relations, social scientists interested in the general field of conflict resolution, as well as practitioners of collective bargaining and other individuals directly involved in international negotiations. The overall theoretical framework has been derived by a mixture of inductive and deductive reasoning. Extensive fieldwork and several dozen printed case studies have provided the bulk of the empirical data. In terms of meaning, the study has three touchstones: the field of collective bargaining; the field of conflict resolutions; and the

This book brings an exciting and innovative new approach to the study of politics today. It introduces political bargaining, a process at the heart of all political and economic exchanges in contemporary society and the very essence of politics itself, to provide a new framework and fresh insights to modern political science. The authors trace the prevalence of bargaining processes in politics from the abstract level of individual human interaction and the `state of nature' to the more concrete political or institutionalized level. They introduce students to theory -- the basic models of game theory, rational choice theory and positivist approaches; practice -- the practical manifestations of political b
